All Rights Reserved

No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission from the Publisher. *Exceptions:* Explicit permission from Academic Press is not required to reproduce a maximum of two figures or tables from an Academic Press article in another scientific or research publication provided that the material has not been credited to another source and that full credit to the Academic Press article is given. In addition, authors of work contained herein need not obtain permission in the following cases only: (1) to use their original figures or tables in their future works; (2) to make copies of their papers for use in their classroom teaching; and (3) to include their papers as part of their dissertations.

The appearance of the code at the bottom of the first page of an article in this journal indicates the Publisher's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-2000 articles are the same as for current articles.

Brain and Language

http://www.academicpress.com/b&l

INFORMATION FOR AUTHORS

Brain and Language publishes original research articles, case histories, theoretical articles, critical reviews, historical studies, and scholarly notes; each contribution will be relevant to human language or communication and related to any aspect of the brain or brain function. Each will have theoretical import, either formulating new hypotheses or supporting or refuting new or previously established hypotheses. The interdisciplinary focus of ***Brain and Language*** includes but is not limited to the fields of psychology, neurology, linguistics, psychiatry, speech pathology, neuroanatomy, neurophysiology, philosophy, and computer science. Manuscripts of several different types are solicited: regular articles, single or multiple case history studies, critical reviews of books of interest to the journal's readership, and short (limited to 10 typed manuscript pages) scholarly notes and discussion.

Submission of Manuscripts. Manuscripts must be written in English and should be submitted in sextuplicate (one original and five photocopies), including six sets of good-quality figures, to:

Brain and Language
Editorial Office
525 B Street, Suite 1900
San Diego, CA 92101-4495
Tel: (619) 699-6393; Fax: (619) 699-6700
E-mail: b+l@acad.com

Language data may be given in English when clearly identifiable; otherwise, they should be transcribed into the phonetic alphabet of the International Phonetic Association (IPA). There are no submission fees or page charges. Each manuscript should be accompanied by a letter outlining the basic findings of the paper and their significance.

Electronic Submission. Authors are requested to transmit the text and art of the manuscript in electronic form, via either computer disk, e-mail, or FTP [ftp.harcourtbrace.com, and then navigating to pub/academic_press/saved/b&l/incoming], each time a new version is submitted. Submission as an e-mail attachment is acceptable provided that all files are included in a single archive the size of which does not exceed 2 megabytes [b+l@acad.com]. Hard-copy printouts of the manuscript and art that exactly match the electronic file must be supplied. The manuscript will be edited according to the style of the journal, and authors must read the proofs carefully. Complete instructions for electronic submission can be found on the ***Brain and Language*** home page (http://academicpress.com/b&l).

Only original papers will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the listed authors and by the institutions where the work was carried out. If human subjects were involved in the research, authors must note in their letter of submittal that the research was conducted using appropriate ethical guidelines. Any person cited as a source of personal communication must have given her or his approval of such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in ***Brain and Language*** represent the opinions of the author(s) and should not be construed to reflect opinions of the Editor(s) and the Publisher. Manuscripts that do not meet the general criteria or standards for publication in ***Brain and Language*** will be immediately returned to the authors, without detailed review.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Copyright Transfer Agreement,

which may be copied from the journal home page listed here, should be signed by the appropriate person and should accompany the original submission of a manuscript to this journal. The transfer of copyright does not take place until the manuscript is accepted for publication. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Authors are responsible for obtaining permissions to reprint previously published figures, tables, and other material. Letters of permission should accompany the final submission.

Digital Object Identifier. Academic Press assigns a unique digital object identifier (DOI) to every article it publishes. The DOI appears on the title page of the article. It is assigned after the article has been accepted for publication and persists throughout the lifetime of the article. Because of its persistence, it can be used to query Academic Press for information on the article during the production process, to find the article on the Internet through various Web sites, including IDEAL, and to cite the article in academic references. When an Academic Press article is used in a reference section, it is important to include the article's DOI in the reference, as volume and page information is not always available for articles published online. See **References** below for samples of DOIs included in references. Further information may be found at *http://www.academicpress.com.doi.*

Preparation of Manuscript. Manuscripts should be double-spaced throughout on one side of $8\frac{1}{2} \times 11$-inch or A4 white paper. Pages should be numbered consecutively and organized as follows:

The **Title Page** (p. 1) should contain the article title, author(s) name(s) and affiliation(s), abbreviated form of the title for the running page heading (not to exceed 35 characters including letters and spaces), and the complete mailing address of the author to whom all correspondence should be sent (including e-mail address and telephone and fax numbers).

The **Abstract** (p. 2) must be a single paragraph that summarizes the main findings of the paper in approximately 100 words. After the abstract a list of up to 10 key words that will be useful for indexing or searching should be included.

The **Introduction** should be as concise as possible, without subheadings.

Materials and Methods should be sufficiently detailed to enable the experiments to be reproduced.

Results and Discussion may be combined and may be organized into subheadings.

References should be cited in the text by surname of the author and the publication date in parentheses, e.g., Gall (1825) or (Gall & Spurzheim, 1810). If more than one article was published by the same author in a given year, the correct style is Bouillaud (1825a) or (Bouillaud, 1825b). All references must be listed alphabetically at the end of the article, beginning on a separate sheet, and typed double-spaced. Journal titles should be written out in full, not abbreviated. Only articles that have been published or are in press should be included in the references. Unpublished results or personal communications should be cited as such in the text. The following examples show style of capitalization and punctuation for journal articles, books, and chapters in edited books. When citing an Academic Press journal, include the digital object identifier (DOI), if noted, from the article's title page. Please note the following examples, the second of which shows an article available on IDEAL but not yet assigned to a printed issue. Please use the following style:

Bryden, M. P. (1982). *Laterality: Functional asymmetry in the intact brain.* New York: Academic Press.

Bunson, B. (2000). Sentence formation after corpus callosum damage. *Brain and Language,* doi:10.1006/brln.1998.1990.

Hicock, G., Kirk, K., & Bellugi, U. (1998). Hemispheric organization of local- and global-level visuospatial processes in deaf signers and its relation to sign language aphasia. *Brain and Language,* **65,** 276–286, doi:10.1006/brln.1998.1990.

Sergent, J. (1986). Prolegomena to the use of the tachistoscope in neuropsychological research. *Brain and Cognition,* **5,** 127–130.

Whitaker, H. A. (1998). Neurolinguistics from the Middle Ages to the Pre-modern Era: Historical vignettes. In B. Stemmer & H. A. Whitaker (Eds.), *Handbook of neurolinguistics* (pp. 27–54). San Diego: Academic Press.

Figures should be in a finished form suitable for publication. Number figures consecutively with Arabic numerals, and indicate the top and the authors on the back of each figure. Lettering on drawings should be of professional quality or generated by high-resolution computer graphics and must be large enough to withstand appropriate reduction for publication.

Color Figures. Illustrations in color can be accepted only if the authors defray the cost. Mounted color figures *must* be submitted on paper or flexible board due to the nature of the reproduction process.

Tables should be numbered consecutively with Arabic numerals in order of appearance in the text. Type each table double-spaced on a separate page with a short descriptive title typed directly above and with essential footnotes below. Authors should submit complex tables as camera-ready copy. Keep in mind the dimensions of the journal when planning the number of columns in a table.

Proofs will be sent to the corresponding author. To avoid delay in publication, only necessary changes should be made, and proofs should be returned promptly. Authors will be charged for alterations that exceed 10% of the total cost of composition.

Reprints. Fifty reprints will be provided to the corresponding author free of charge. Additional reprints may be ordered; an order form will be included with proofs.
